

## Warranty Statement

A standard warranty period of one year from date of receipt by the original purchaser, for all products not indicated otherwise by quote, agreement of sale, or other mutual written agreement initiated by Distributed Elements Ltd. (DEL), is applied to all products manufactured by DEL. Within this or any other warranty period, any defects in material and/or workmanship will be replaced or repaired at the discretion of DEL, at no charge to the customer for parts or labor.

Governing product ratings are those specified in the data sheet, as interpreted and de-rated according to application note AN114, "Power Derating Calculations", unless specified otherwise by DEL in direct communication of specific customer conditions. Collateral damage caused by failure of connected items, such as cables or connectors insufficient for the application, is not covered by this warranty. All specified ratings and de-ratings are made according to the principle of a neutral thermal plane at the connector reference planes, such that injection of additional heat load from a customer-connected device lacking sufficient internal heat sinking may invalidate these ratings.

Use of the product beyond stated ratings for any duration voids all warranties, whether by intent or accident. Documentation of usage parameters and conditions may be required to determine contribution of usage conditions, prior to determination of warranty. The above warranty is Distributed Elements' sole warranty and to the extent of its liabilities and obligations with respect to its products unless otherwise explicitly agreed to in writing. DEL makes no other warranty of any kind, express or implied, and disclaims any warranty of merchantability or fitness for a particular purpose. In no event shall DEL be liable for any incidental, consequential, or specific loss or damages, or for any sum greater than the purchase price of the product.

DEL will cover the cost of returning repaired item(s) to customer original purchase shipping destination, in cases when the repair falls within the scope of this warranty. Customer shall be responsible for cost of shipping item(s) to DEL at Schwenksville, Pennsylvania, as well as return shipping from DEL to customer in cases when the repair falls outside the scope of this warranty, or in cases where the desired return location varies from the original shipping destination. To aid in the speed and ease of delivery, DEL may make required shipping arrangements on behalf of the customer, and bill customer at direct cost rate for items shipped either direction, according to this policy.

Distributed Elements reserves the right to make changes in the design of its product at any time without incurring any obligation to make those changes on products it has previously sold.
